carlton radial drill manual

If you do not already have it, If you find the information on this web Donations can be made through VintageMachinery.org does not provide support or parts for any machines Please remember that safety standards have It is up to the individual user to use The VintageMachinery.org. They succeeded William E. Gang Co. circa 1917. Parts and service are available from Lucas Precision in Cleveland. VintageMachinery.org does not provide support or parts for any machines Please remember that safety standards have It is up to the individual user to use The VintageMachinery.org. DIGITALLY CLEANED Every page of every manual. Hi, I'm Ray. I've been in the woodworking business for over forty years. Twenty years ago, I decided to go into metalworking as well, in order to make the machinery and jigs that my woodworking required. Since then, I've accumulated many different machines, along with their manuals. As a self-taught craftsman, I've frequently needed manuals and books to help myself set up or operate complicated machines. That is why I started this service with my family to make hard-to-find manuals easier for other craftsmen to obtain. I wanted to make the best quality, printed manuals to work with in a shop. After all, I remember the day when they didn't even have computers. We do More than Sell Manuals My son and I do metal and woodworking in our shop. We make some of the smallest inlay in the world. The duck call pictured has over 1,117 individual pieces of wood in it. You can learn more about our shop on our About Us page, or Ozarkwoodworker.com. We also try to help others identify their machines, and share some of the knowledge we've received over the years of experience with rebuilding machines for our shop. That is why we started Ozark Shop Talk Blog to give back to the many people that have helped us learn. We are self-taught machinist and woodworkers, and we had to use the HowTo Books, and information in the manuals to learn ourselves. Used Very Good Please try again. <http://www.geoexcel.com/fckuploads/bosch-rexroth-eco-drive-manual.xml>

This ensures you that the part will fit properly and have the same high quality as the original. On Natco MultiSpindle Drills, this number is stamped into the NATCO emblem that is attached to the side of the machine column or on a plate on the head of the machine. In addition, we can in many cases supply replacement spindles for nonNatco equipment. Contact our spare parts department to discuss your needs. This ensures you that the part will fit properly and have the same high quality of the original. Carlton Radial Drill Serial Numbers are usually stamped into the face of the Arm between the arm ways near the column. With this number and a description and location of the part, it is usually only a matter of minutes before the part is identified. We focused on the quality of our products while maintaining unparalleled status in their field. While keeping up with the latest innovations in technology, we have managed to be steadfast and loyal to traditions for 89 proud years of manufacturing. I dont know,Im not there just trying to help dad out as he is not a computer user.Thanks for any information. mikeMy brother worked there when they closed. I doubt there is a parts source left for them.I gather they will rebuild and supply parts. I am sure that means get your wallet ready.Thats a whole nother story, so not to hijack the thread with it. We had bought the radial drill from LucasPrecision. They made good on it and we got an even better one than the one which had been totalled. Anyhow, back to the main thread Carlton became NatcoCarlton.

All of the drawings and records on Carlton drills are now in the posession of LucasPrecision. In addition, they have a lot of the machine tools and production tooling for making replacement parts for the Carlton drills. They also have precision grinders for finishing up the machine tool spindles and journals. The Carlton operation is based, along with Lucas, out of a plant in Cleveland, Ohio. They also have a facility and offices in Richmond, Indiana. If anyone should want to purchase a NEW Carlton radial drill, Lucas will make it up from NEW castings. The expense and time are quite substantial. I think the price, a couple of years back, was right around 45K with about 4550 week lead time. We opted for having LucasPrecision find us a good used machine and recondition it in their shop. NatcoCarlton has a couple of phone numbers in Richmond, Indiana 7659626511 8004286521 Sales and records for the Natcocarlton machine tools are handled out of the Richmond,

Indiana office. There are a few men there who are former NatcoCarlton employees who are quite helpful. Lucas Precision, at the Cleveland plant is at 2164515588. If it comes down to getting a Carlton drill reconditioned or remanufactured, or parts made for a Carlton drill, then it is handled in the Cleveland plant. I cannot comment on pricing for individual replacement parts or manuals, since we bought a reconditioned machine tool. Being a powerplant and needing a radial drill, we are in a different ballpark than a small shop owner when it comes to expenditures. Let a power generating turbine or piece of electrical transmission equipment be down for repair and all stops are pulled out to get it fixed and online again. Having good working machine tools in the plant shop is what we look at. The cost of a radial drill or parts for it quickly pales in comparison to lost revenue on a power generating unit and the resulting costs of replacement power and penalty charges. So, we tend to buy the best for our shop.

I do know that the people we dealt with Gene Sizelove, Paul Mandelbaum and Sergei Huffman were technically knowledgeable and reasonable to deal with. I can also say that the reconditioned Carlton drill we got from them is a first class machine tool. It is as good as a new machine tool. Joe Michaels
This site has been great. We have an ancient Carlton Drill Press that I needed some info. Here are some schematics and here is a recall that was issued a while back Fram filters are famous for its gasket coming off and sticking to the surface of the inlet. When you tighten the new filter it crimps the new gasket and leaks all the oil out. I have had this happen to me twice. No more Fram

filters for me. Buy PUROLATER. Hope this helps Fram filters are famous for coming off and sticking to the surface of the inlet. When you tighten the new filter it crimps the new gasket and leaks all the oil. I have had this problem twice so no more Fram filters for me. Buy PUROLATER they seem to be the best and they dont cost much more. Hope this helps In middle of housing. Remove inner seals on bearings.

Light oil on idlers. By the chuck, or the selector knob, or is it leaking from where the gear housing meets the motor housing. I could be one of 3 things. There is a seal between the two housings that could be damaged, not likely though. There is an oring on the selector knob that can get worn, and there is a sealed bearing on the spindle that should not let any oil through. There should not be any oil in this tool for lubrication. Grease is used in this tool for lubrication. If you are getting oil or a liquidy type substance coming out it is more than likely the grease has broken down and needs to be replaced. Its not too old. The piston is no longer working and theres no movement on the bit Any suggestions Any suggestions Answer questions, earn points and help others.
